

USE OF TECHNOLOGY

Through technology, District U-46 provides access for students and staff to resources from around the world. Expanding technologies take students and staff beyond the confines of the classroom; provide opportunities for enhancing, extending, and rethinking the learning process; and assist in preparing each student to be a productive citizen. This new capability requires guidance for students and staff.

The Board of Education believes that the value of information and interaction that technology offers outweighs the hazards of its misuse. Making network access available, however, carries with it the potential that some network users will encounter sources that some consider controversial or inappropriate. Because information on networks is transitory and diverse, the District cannot completely predict or control what users may or may not locate. Technology provides a conduit to information; the users must be aware of the sources and content and be responsible in choosing information to be accessed.
