

# Models and Representations

## Addition

In Module 1, students were encouraged to Count all (Level 1) and Count on (Level 2) to add and subtract. In this module, students learn decomposition and composition strategies (Level 3) by making ten. Students may continue to count on to add and subtract. The purpose of composing and decomposing ten is to lay the foundation for the role of place value in addition and subtraction.

## Subtraction

$$12 - 9 = 3$$

$$\begin{array}{c} 9 \bullet \bullet \bullet \\ 10 \ 11 \ 12 \end{array}$$

Students will begin to solve subtraction by counting on (Level 2).

$$\begin{array}{c} 12 - 9 = 3 \\ \swarrow \quad \searrow \\ 10 \quad 2 \\ 10 - 9 = 1 \\ 1 + 2 = 3 \end{array}$$

**12 is seen as 10 and 2 more.**

Students begin to realize that they can decompose the teen number into 10 and some ones (Level 3). For example, in the problem  $12 - 9$ , students see 12 as 10 and 2 more. Students subtract the 9 from 10, and have 1 left over. They then add the left over 1 with 2.
